New system profile of window's

- ① New 6-chamber system of window's profile which is 80 mm width PLASTIMET ELITE guarantees thermal protection and acoustic isolation at the highest level
- ② Wide sash's profile - 90 mm - provides the perfect look of the windows and allows to keep excellent technical parameters
- ③ The possibility to use 24 mm to 44 mm glazing thickness in two or three glass package
- ④ Dual gaskets system maintained during the profiles' production. Outside gaskets perfectly drain water and provide excellent protection from uncontrolled air exchange
- ⑤ Properly designed chambers for reinforcement guarantee the optimal static parameters and allow to make large dimensions windows
- ⑥ More light passing through the window because of the large glazing surface and the small sideways height of profiles' - 110 mm
- ⑦ Smooth, resistant to weather conditions external surfaces make the windows easy to keep clean
- ⑧ The special nick enables to set up modern and reliable fitting's system which is responsible for well functionality of the windows
